FEATURED PRODUCT: OCZ Vista Upgrade Memory

Vista is here and so is OCZ's highly anticipated 4GB DDR2 kits! With the arrival of Vista, OCZ introduced the new OCZ Vista Upgrade series. The new lineup is optimized for perfect compatibility for those transitioning from Microsoft Windows[®] XP to Vista[™] and will be available in both DDR2-667 and DDR2-800. For gamers shifting to Vista and who prefer the performance of high speed memory, the PC2-6400 Vista Upgrade 2GB kit is the ultimate upgrade from 1GB of RAM. As a Vista up-grader, the PC2-5400 4GB dual channel kit will provide maximum memory bandwidth and deliver the most efficient operation possible.

OCZ Vista Upgrade Memory

OCZ is dedicated to providing memory solutions for the latest industry milestones, and the Vista launch is the ideal platform for OCZ to provide a necessary system component for all Vista advocates. The OCZ Vista Upgrade series was developed to convert a sluggish recently upgraded system into a superior computing experience ensuring the best possible gaming and productivity on Vista systems.

Each memory module features a proprietary OCZ XTC (Xtreme Thermal Convection) heatspreader for the most effective heat dissipation. Furthermore, each OCZ Vista Upgrade module is 100% hand-tested for quality assurance and compatibility and is backed by an industry leading OCZ Lifetime Warranty and technical support for unparalleled peace of mind.

Gearing up for 2007 - OCZ at CES

As OCZ gears up for another great year, the 2007 Consumer Electronics Show was the perfect opportunity to reveal what we have in store for overclockers, enthusiasts, and gamers. Adding to our enthusiast cooling product line, OCZ showcased the Vindicator CPU cooler and the unique "silver array" CPU water block. For the performance-minded gamer who seeks every bit of extra edge over competitors, OCZ showed off their impending Equalizer mouse which features the OCZ "Triple Threat" button. As an innovator in the flash market, OCZ exposed their new Trifecta memory card, a total flash solution that features Micro SD, SD, and USB-readiness in one unit. Perhaps the most stunning product present at the OCZ suite was the robust 2000W power supply!

OCZ @ CES

OCZ[®] EDGE

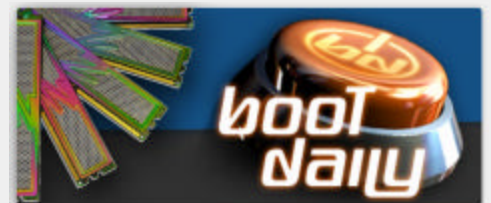

OCZ PC2-9200 Flex XLC featured in Hardware Zone's Best of 2006

"OCZ cranked up the heat in 2006 with extreme overclocking memory and then cooled it back down with their innovative FlexXLC DDR2 DIMMs. These babies start at 1150MHz and sport a hybrid heatspreader that can be used like a standard air-cooled solution or setup for extreme water-cooling."

OCZ GameXStream makes the Inquirer's Best of 2006!

"The OCZ 700W GameXStream power supply can run Crossfire, two Geforce 8800 GTX in SLI and all the peripherals and it even beats some of the 850W that we had in our hands. This is the best buy high end PSU at the same time as in Germany it costs just around €125. We love it as we know that it won't crash in the middle of 3Dmark05 with Crossfire or SLI . "

OCZ Wins Best Memory and PSU of 2006 from Boot Daily

"OCZ Technology quite simply has some of the fastest and more reliable DDR2 solutions out right now...Its PC28000 represents the best in today's high-speed DDR2, offers excellent stability and overclockability, and is available at most leading retailers. OCZ's GameXStream is SLI-ready, available up to 850watts and has snazzy braid-covered cabling which helps conceal the bright colors and protects them as well. "
