

FEATURED PRODUCT: Rally2 Turbo USB Drive

Get ready for the fastest speeds on the market! The Rally2 Turbo takes data transfer to incredible new heights and leaves the competitors in the dust thanks to the ultra-fast flash technology. With unbelievable 30mb/sec read and 5mb/sec write speeds and super sleek design, the Rally2 Turbo is the ultimate flash drive for pros on the go.

Available in 2GB, 4GB, and 8GB capacities, the Rally2 Turbo line lets you customize your storage needs depending on if you prefer to take your music and videos with you, or need to carry around important presentations and documents. Store and transfer large music, pictures, videos, and data files to your laptop or desktop in record time or simply "Plug and Play" them instantaneously from the convenience of any USB port...your own personal portable hard drive! The Rally2 Turbo Drive excels when managing a wide range of media, and is optimized to more rapidly transfer today's larger files.

The super-ergonomic aluminum housing leaves a compact footprint when plugged into those precious few USB ports, so you can access your files without having to disconnect other devices to make room. Change to the fast lane, and take the incredible OCZ Rally2 Turbo Flash drive for a test drive. Backed with a limited lifetime warranty for the ultimate peace of mind, the Rally2 Turbo should be at the top of every list for speed, design, capacity, and reliability.

CeBIT 2008 Just Around the Corner

Next month OCZ is heading over to Hannover, Germany to show the World what we're made of. Between March 4th and 9th, OCZ will be showcasing many groundbreaking products that cater to the particularly demanding European enthusiast community including brand-new lines of memory, flash, and power supplies from OCZ and the unveiling of new PC Power & Cooling PSUs. New to the show, Hypersonic will also have their premium gaming notebook solutions on display. OCZ is ready to gear up the CE world with the hottest new products that will meet the demands of the global enthusiast market, so don't miss out!

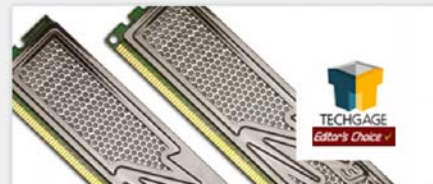

OCZ[®] EDGE

PCP&C Silencer 750 Named PSU of the Year at AnandTech!

"It was one of the first units we reviewed in 2007, and remains the best overall power supply we've tested. In addition to top-notch performance, the Silencer 750 QUAD is equipped with a full range of connectivity options and ample wattage for nearly any high-end system, including SLI or Crossfire configurations. AnandTech's top recommendation goes to the Silencer 750 QUAD."

1.6 GHz Intel Xtreme DDR3 Lived up to its Name at Techgag!

"It delivers on its promises while going the extra mile on the side, which was unexpected. They proved completely stable at DDR3-1800 speeds (while those speeds at stock cost a lot more), its XMP profile worked beautifully and the titanium spreaders struck my fancy."

Vendetta Snags FOUR awards at Gamezoom Germany!

"With the Vendetta, OCZ offers a high performance cooler at a decent price level. We didn't even have to push the Vendetta to the max in order to run our Intel Quad Core at the limit, this is due to the direct touch heatpipe design."

Tweak Town Chooses OCZ Freeze for Best Performance!

"OCZ has brought to the table a thermal material that beats the silver goops hands down, requires no curing time, and is not electrically conductive. It performs right in line with similar products being offered and is also cheaper than Arctic Silver. I have no qualms at all in recommending a tube of OCZ Freeze for your next (or current) build. It works well and will last a long time after applying, so you just cannot go wrong."
