

## FEATURED PRODUCT: OCZ Vendetta 2 CPU Cooler

The latest processors demand the extreme cooling capabilities of the Vendetta 2, with a massive 120mm fan for the ultimate efficiency and power! Designed to maximize performance when overclocking, the distinctive stacked fin design and trend-setting heat pipe direct touch (HDT) design combined with a large low-noise fan is built to quietly solve any cooling challenges your system will face.

Vendetta 2 delivers extremely efficient heat dissipation

Engineered to aggressively handle the excessive heat produced by enthusiast systems, the Vendetta 2 builds upon the already excellent performance of the original, and delivers ultra-quiet performance courtesy of a 120mm fan mounted with anti-vibration rubber connectors to reduce excess noise. The Vendetta 2 delivers extremely efficient heat dissipation to enthusiasts at a price point that is still enticing to a variety of budgets.

Utilizing the proven performance of the latest HTD design, the Vendetta 2 has direct contact with the processor using three copper heat pipes to ensure the most rapid heat transfer and a lighter weight... no more heavy base plate! The dimple micro-configuration of the stacked aluminum fins adds turbulence, reducing the skin effect of laminar air flow for more efficient circulation within your case. The versatile and user-friendly Vendetta 2 is compatible with AMD AM2/939/754/755 and Intel 775 sockets and can be installed quickly and easily by end-users at all skill levels.

## OCZ Takes CeBit by Storm!

OCZ, PC Power & Cooling, and Hypersonic showed the globe some of the hottest new technology in development. From high performance memory, brand new enthusiast power supplies, awesome gaming laptops, and especially the freshly released Neural Impulse Actuator, there was something for everyone to be impressed with. Thanks to the European customers, media, and end-users that made another great year at CeBit!

The OCZ Group booth was a hot spot for show-goers

### TurboCool 860 Earns the Gold Award from PC Perspective!

"The new PC Power & Cooling Turbo-Cool 860W power supply was designed for both industry professionals and high-end gamers who demand the very best. The 860 demonstrated excellent efficiency, very good voltage regulation, and produced clean outputs. The build quality of the Turbo-Cool 860W power supply is excellent and it is backed by PC Power & Cooling's new 7-year warranty and legendary support. If you like to tweak things and are looking to fine tune your DC output voltages, the Turbo-Cool 860 allows some adjustment without providing too great a range that could inadvertently cause damage to your PC's components."

### SATA I 2.5" SSD Comes Highly Recommended by Hardware Norway!

"With the OCZ SATA I SSD we can conclude that flash memory based storage has finally grown up. The solid state drives certainly have the right to live, even more than that in a lot of tests it left the competition behind by a large margin. The access time speaks for itself, the OCZ SSD drive even beats the Raptor X drive - very impressive! Compared to a regular 2.5" hard drive we would choose an SSD without hesitation."

### 4GB Reaper Kit Awarded for Price and Performance at Legion Hardware!

"This new 4GB kit offers impressive timings at frequencies up to 1066MHz, at a bargain basement price! We were able to reach a total clock frequency of 1162MHz, which is impressive for a 4GB memory kit. For 4GB of memory the OCZ DDR2 PC2-8500 Reaper HPC 4GB kit is incredible value. Over the past year DDR2 memory has become unbelievably affordable, making 4GB memory kits such as this OCZ example more than just a luxury item that everyone can afford."
