

FEATURED PRODUCT: Z-Drive

Get ready to go from zero to Z! OCZ's latest speed-demon creation is based on the cutting-edge PCI Express 2.0 architecture that shatters performance barriers of the SATA interface to offer a truly enthusiast-grade storage upgrade from traditional hard disc drives. OCZ's Z-Drive packs a punch with combined 256MB of local cache and onboard RAID controller to provide a complete solution in a compact form factor.

The Z-Drive shatters performance barriers!

The OCZ Z-Drive is the result of the latest breakthroughs in technology building on the advantages of flash-based storage, delivering incredible phenomenal that translates to professional-class data storage. Z-Drives feature mach speeds up to 500MB/second, all while delivering lowered power consumption, ultra-fast data access, superior durability, and lower cost per ownership compared to conventional hard drives when factoring in the need for multiple drives and a separate RAID controller. Amass your most crucial data in configurations of 250GB, 500GB, and 1TB capacities to create a high performance storage array for enthusiast high performance systems, and get ready to be blown away.

CES 09 RECAP

From the heart of Sunnyvale to the Hills of San Jose, OCZ has moved to a larger office space to accommodate our ever-expanding staff and business developments. OCZ made the move to increase the amount of resources and space available for R&D facilities, support staff, training workshops, and validation labs. The relocation is a true testament of our commitment to continually better ourselves for our customers and the enthusiast community that has supported us from day one.

OCZ's new corporate office rests at the foothills of San Jose, CA

OCZ[®] EDGE

Overclocker's Award goes to Reaper 1866 Triple Channel at Neoseeker

"This OCZ Reaper comes in at 1866 MHz which is already pretty fast and while Elpida's Hyper memory chips are notorious for reaching higher clocks, I didn't expect to extract much more out of them. This triple channel memory from OCZ kit is perfect for those looking to get as much as possible from their brand new Intel system. Their performance at stock settings is impressive so everyone can enjoy the speed without much hassle while overclockers will appreciate the overclocking headroom."

Coveted Gold Award goes to Fatal1ty 700W PSU at Hardware Secrets

"We were impressed by Fatal1ty 700W. It can deliver far more than its labeled power at 50° C (840 W in our tests), has an excellent efficiency peaking 88%, has an amazingly low noise and ripple levels and enough cables for even the high-end user. The best of all: it comes at a very good price for a 700 W model. That is why we recommend this power supply."

ExtremeTech Impressed by Platinum Triple Channel Kit!

"OCZ makes great memory. When we saw a triple-channel 6GB kit of DDR3-1600 from them for just over \$100, we had to double-check the price, and check it again, and check it on another site. There has to be a catch, right? It turns out, there's no catch. It's 6GB of quality, fast memory at a very good price. If you want to go really extreme in your overclocking you'll want to spring for even faster stuff (and the price climbs very quickly), but 1600 MHz is fine for our modest overclocking needs here."
