

■ FEATURED PRODUCT: OCZ GameXStream

"XStream" Gaming! Meet the PSU that delivers ultimate balance of price and performance! The new OCZ GameXStream, available in 600 and 700 watt configurations, is the ideal solution for today's power-hungry gaming rigs. Modern graphics subsystems require a substantial amount of power that conventional power supplies cannot offer; the OCZ GameXStream is well-suited to provide sufficient stable power for Crossfire and SLI systems so gamers get the best gaming experience possible. Not only does the GameXStream offer rock solid stability but does so in a compact unit that fits in all PC towers and cases.

Meet the PSU that delivers ultimate balance of price and performance!

The GameXStream PSU connector cables, including dual PCI-Express and a 4/8-pin CPU connector, are wrapped in a flexible mesh promoting a tidy environment inside the case. Kept ultra-cool with a large 120mm fan, the GameXStream remains virtually silent and supremely cool even at peak loads so gamers can hear their games and not their PC. All OCZ GameXStream power supplies come backed with an industry-leading three year OCZ PowerSwap Warranty for the ultimate peace of mind. Second to no other gaming PSU, the GameXStream's unprecedented quality, power, and performance is the preeminent solution for today's serious gamers.

The GameXStream 600 and 700W power supplies are currently available at your favorite reseller!

■ OCZ is not just in your PC!

A fan of OCZ's quality and reliability? Last month OCZ Technology released their new line of Secure Digital™ Cards. Speed-rated up to 133X, OCZ SD Flash delivers fast and flawless performance and reliable storage for MP3s, digital images, and more. OCZ SD cards are ideal for high performance digital cameras, MP3 players, PDAs, and GPS units. The OCZ SD Card line is available in 512MB, 1GB (1024MB), and 2GB (2048MB) capacities in speed-rates of 60X for the average user and 133X for the speed enthusiast. Featuring an industry-leading Lifetime Warranty, OCZ SD cards are welcomed like one of the family!

AnandTech Awards OCZ PC2-8000 EE the Editor's Choice!

"OCZ EL PC2-8000 is the best performing DDR2 memory ever tested at AnandTech. It may be similarly impressive, but OCZ is the first to bring these new Micron DDR2 chips to market. We are pleased to award OCZ EL PC2-8000 XTC our Gold Editor's Choice for the best performing DDR2 memory you can currently buy. This memory provides the lowest DDR2 memory timings possible to DDR2-533. The memory is rated at DDR2-1000 and provides exceptional performance all the way to DDR2-1100 at the fastest timings and lowest latencies seen in any DDR2 memory. OCZ EL PC2-8000 XTC is a very welcome addition to the Memory Market."

"That word is extreme"

"What OCZ has brought to the table with its DDR2 PC2-8000 Platinum XTC Extreme Edition memory is extremely high speeds coupled with reasonable timings. What's just as impressive is that a 2GByte pack is available right now from a number of e-tailers."

The PC-3200 Platinum XTC 2GB Kit Scores Big!

"It performs well, looks great and even overclocks pretty good as well. The price to performance ratio is very good, the best I have seen actually...Of the three kits I have this is the lowest price and almost equals the performance of the ram that is almost double its' cost. OCZ is known for great performing ram, and again they have proven they know how to do it."
