

FEATURED PRODUCT: StealthXStream PSU

Wouldn't you like your own secret agent working for you and your computer system? OCZ has become synonymous with sturdy, sophisticated power supplies with slick casing and radiant blue LED lights for the enthusiast that likes a little extra show and style in their system. But this new 600W PSU puts flashiness aside and creeps into stealth mode...the sleek black casing, lack of glowing LEDs, and ultra-quiet fan is the ideal design for those who don't want distraction while gaming. This PSU is ideal for the value-minded consumer, as it is priced competitively with other units of similar power capacity.

Just right for system builders and enthusiasts who prefer a low-key PSU, the StealthXStream focuses on performance, quality, and quiet operation. With a sustained output of 600W, it is well-suited for driving today's higher end systems and maintains an economical yet stable supply of power. Even at peak loads it remains virtually silent and supremely cool.

The StealthXStream comes complete with two PCI-Express cables and a 4/8 CPU auxiliary connector. These are among the other covert features, because the mass of cables are ingeniously wrapped in a flexible black mesh to promote a tidy environment inside your case.

And you can't go wrong with the three-year power swap warranty, which allows you to push this hardy unit to the limit. For a dependable and unobtrusive power supply, the StealthXStream will be your ultimate undercover ally.

OCZ Benchmarking Team hits 12th Place Worldwide!

Starting out with literally nothing a mere month ago, OCZ's very own benchmarking team has reached a top world ranking. The twenty members led by "Rgone" consistently hit top ten HWBOT rankings in nearly all categories. Supplied with initial samples from the OCZ cooling, memory, and power supply lineups, the team took dedication to the next level and spent hours tweaking and benchmarking. It all paid off with the numerous personal awards and the collective world rank each team-mate has contributed to...they have truly made OCZ proud! For all you overclockers out there who love to compete, why not join the OCZ forums and benchmark to win some top hardware in the process?

Official Team Benchmarkers: Rgone, Raja, Burlnutt, MarcusDelirious, Ryder, Tony, Praz, Nutcase, Logann26, NicoOCZ

Anandtech Anticipates a Great Expansion of OCZ Cooling Products

"The stock Vindicator fan is clearly designed for low noise first. If your goal in purchasing a new cooler is silence you will be happy with the full OCZ stock package. For OCZ, the Vindicator is said to be the first in a much expanded line of CPU coolers. If you want a quiet PC and modest overclocking you will be very happy with the stock OCZ kit. It is quiet and cools reasonably well. The OCZ Vindicator is a great beginning to an expanded OCZ cooler line."

PC-8500 NVIDIA SLI Ready Edition Passes Every Test for CPU3D

"Well what can I say. These memory modules from OCZ Technology have really impressed us. Not only does it look good, but also offers great performance and excellent overclocking ability. I was able to push these modules to 600MHz (that's DDR2-1200 spec) ... with no problems at all. It came top of the list in every test during our benchmarks. OCZ DDR2 PC2-8500 SLI-Ready 2Gb kit makes a great addition to any gaming rig. Whether you are an enthusiast or extreme gamer, these modules offer great performance and excellent overclocking ability."

The PC2-9200 Reaper HPC Ousts Corsair's Dominator in Techgag Trials

"It probably will not come as a surprise to know that I recommend these modules. This kit proved the highest overclock of any other we've reviewed in the past. Corsair's DOMINATOR 9136 was at the top for quite a while, but it was dethroned thanks to the Reaper 9200s extra 7MHz. From an overclocking standpoint, you cannot go wrong. OCZ's 9200 Reaper is the fastest kit currently on the market for the price."
