between various PC systems as well as experience blazing fast transfer speeds!

The super-sleek Enyo makes use of the increasingly popular SuperSpeed USB 3.0 interface to make transferring anything from spreadsheets to high definition movies significantly faster than traditional media. Consumers never have to leave home without their valuable files again! In addition to cutting-edge performance, the Enyo offers superior power management and lower CPU utilization far surpassing the capabilities of external hard drives. With its brushed anodized aluminum housing, these drives make storage a blazing ten times faster than USB 2.0 speeds, all while adding style to your system. Enyo features background garbage collection to help maintain "like-new" performance throughout its lifespan, and comes in various capacities to suit your plethora of files and applications.

The Enyo goes for the "Gold" at PC Perspective!

"The OCZ Enyo portable SSD is an incredibly fast external storage solution that easily rivals the performance of internal SSDs but in a much more convenient package. The drive has some style to it as well with a slick anodized aluminum finish and clean lines enveloping its svelte dimensions. As our performance numbers above indicate the Enyo is faster than the Super Talent SuperCrypt USB 3.0 thumb drive we first tested last month and should appease even the most demanding mobile user. If you are looking for a slick external drive for incredibly fast backups then it is worth a try!"

Tech Report gives the Agility 2 SSD a hearty "Recommended" award!

"SF-1200-based drives we tested offer solid sequential throughput and very fast random access times across a range of transfer sizes. Throw in quick load times and a strong showing in our multitasking tests, and all the hype surrounding SandForce looks very much deserved. The Agility 2 is already the cheapest 100GB SandForce-based drive online. Based on current pricing and the performance parity we've observed, the Agility 2 is the one I'd recommend. Plus, OCZ gives you one more year of warranty coverage than Corsair and the promise of future firmware updates."

Vertex 2 performance blows away MyCE.com!

"The sequential reading speeds on the OCZ Vertex 2 series SSD is excellent and the fastest single drive we have ever tested here at MyCE.com. Sequential writing speeds were also the highest we have ever encountered here at MyCE.com, and the same applies to 4k random write. This level of 4k random write performance places the OCZ Vertex 2 in enterprise class territory. The OCZ Vertex 2 is a phenomenal SSD, its state of the art, and strong in every area it needs to be and the fastest SSD we have tested here on MyCE.com."
