

FEATURED PRODUCT: Z-Series 1000W Power Supply

Ditch your inefficient power supply and go for the gold! The Z Series is the all new enthusiast grade power supply that not only delivers outstanding performance but also extreme efficiency. True to our roots, OCZ Technology designed and developed the Z Series for power users searching for nothing but the best. Paving the way toward the most efficient means of achieving high-end performance, these PSUs feature ultra-high efficiency of 90% and have achieved the 80+ Gold Certification. OCZ strived to make the Gold Z Series a true "best-in-class" power supply, including a powerful single +12-volt rail design and an industrial-grade core engineered for maximum stability and reliability.

The Z Series is the all new enthusiast grade power supply

Built for excellence, the Z Series raises the bar in power management and provides an unparalleled solution for enthusiasts who won't settle for anything less. The Z1000 provides rock-solid power for the systems of gamers, enthusiasts, and power users, featuring a peak wattage of 1100W and a single +12V rail (83A) design. The Z1000 doesn't put limits on your system the way competing PSUs do! Also available in a modular version, the Z Series is your golden opportunity to achieve great power and stability with your gaming, professional, or hardcore system.

OCZ Shows off Latest and Greatest at Computex

Computex 2009 in Taipei was full of surprises as the OCZ team debuted some great products to buyers and reviewers alike. Our full range of award-winning SSD's was topped off with the Summit Series and 1TB Colossus 3.5" SSD, while our notebook and peripheral categories have been enhanced with an Ion-based DIY netbook and the high-end Sabre OLED keyboard. The combination of great products, great people, and high energy proved to be a big hit and the excitement from the show has sent enthusiasm from Taipei to San Jose!

Our SSD lineup caught everyone's eyes

OCZ[®] EDGE

Summit Series is Unmatched at Benchmark Reviews!

"OCZ Summit Solid State Drive offers excellent read and write bandwidth speeds and an exceptional 0.10 ms response time with very good MLC IOPS performance. The Samsung S3C29RBB01 controller is a formidable opponent to the competition. The OCZ Summit is best suited for cutting-edge super-users and performance enthusiasts who want unmatched response time and bandwidth speed from their computer system."

Blade 2000MHz Demolished Competition at Driver Heaven

"The OCZ Blade kit gave us the most impressive results in our overclocking tests. OCZ have gone for the best performance they can achieve by using more expensive components. The result is a set of memory which provided the best performance in every one of our tests and offers a lifetime warranty at these extreme settings. In every scenario the Blade kit was ahead and this makes them an ideal purchase for those who want the best performance available."

Pro-Source 1500 UPS impresses Bjorn3D

"The Pro-Source was spot on in every testing scenario we could come up. It reliably shuts the computer down during power outages, protects against overvoltage, undervoltage, catastrophic power failure and shuts the rig down during power outages. The consistent excellent performance of the Pro-Source 1500 in the worst testing we could throw at it and the stable voltage it fed the test rigs during severe lightning storms earn it a Golden Bear Award."
