

## FEATURED PRODUCT: Silencer 750 Quad Cross Fire Edition

This latest edition by PC Power and Cooling is designed with ATI enthusiasts in mind. Add this Ferrari red PSU to your CrossFire rig and you will have one unstoppable system! The new Silencer 750 Quad offers the best mix of power and peace, with an enduring architecture and unmistakable style.

Silencer 750 Quad Cross Fire Edition

Power-hungry GPUs and cutting edge platforms are no problem for this PSU! The high-performance essentials for modern gaming systems will not bog down your rig with the Silencer 750 Quad picking up the slack. Tested and qualified under AMD's renowned certification program, the rock solid Silencer CrossFire edition meets the highest demands of quality and guarantees superior compatibility with CrossFire technology. This PSU comes complete with an array of connectors including quad PCI-Express, 24-pin, dual 8-pin, and 4-pin motherboard, and is one of the only units equipped to power HD 2900 XT CrossFire technology. With its 750 Watts of continuous power, all Silencer 750 Quad high-efficiency power supplies offer hardcore enthusiasts the most powerful single rail design on the market. Even at this high output, the Silencer lives up to its name and won't distract you from your gaming, and is expertly engineered to be the quietest PSU available with up to 90% less noise per watt.

Don't forget the industry-leading three year warranty, and unbeatable technical support from the technical gurus at PC Power and Cooling. Enjoy your enhanced CrossFire gaming and computing experience with this ultimate peace of mind.

## Computex Shows the World the Latest of OCZ Innovation

Another successful year at Computex! Some unexpected and innovate products were displayed, showing industry pros what future OCZ product lines they can look forward to.

The patent-pending Firewire Drive was demoed at blazing fast read/write speeds on the OCZ rig, surpassing typical USB drives with amazing performance.

OCZ wowed the world with the latest prototype of the Neural Impulse Actuator, as many reps donned the sensor array headband to test out the feeling of gaming with no keyboard. Even the most skeptical onlookers were converted!

The ultra-cool ATV and ATV Turbo flash drives ran live under water, showing that they are indeed waterproof...that slick rubber tread isn't just for looks! The innovative HydroJet got the industry abuzz. With the invention of this self-contained liquid CPU cooler, OCZ proves it can make more than just high quality memory.

The Neural Impulse Actuator makes gaming "mind" over matter!

## OCZ<sup>®</sup> EDGE

### ProXStream1000W is Worth its Weight in Silver at [H]ard OCP!

"The OCZ ProXStream was a product that demonstrated excellent build quality from the get go. This build quality resulted in a product that performed well in all our tests. In our tests the ProXStream 1000w did everything it was supposed to do and did it well."

### PC2-9200 Reaper HPC Certified Extreme Hardware from Hexus!

"The OCZ Reaper HPC DDR2 PC2-9200 modules offer a novel cooling approach along with a reasonable price tag. Our initial impression of the product was positive. Speaking of positives, OCZ's warranty is another. You can't get much better than a lifetime warranty and the additional EVP coverage is a bonus for overclockers. We'd be shocked if anyone bought the OCZ and didn't turn out to be a happy bunny."

### OCIA.net Tests the Limit of new SDHC Speed Class 6 Cards!

"I have been using the OCZ 8GB SDHC card for a few days now and have had absolutely no problems out of it. After a few days of snapping photos, I have gathered just over 600 pictures on the card. The camera is reporting an estimated 737 photos left until card capacity is reached. This may not sound like many pictures considering the 8GB capacity, but factor in that I shoot at the maximum .JPG image quality (Fine - 3872 x 2592 resolution - 10.2 MP) and things soon fall into perspective."
