

FEATURED PRODUCT: OCZ Agility Series SATA II 2.5" SSD

Ready to take the plunge with solid state drives? Aimed at the mainstream performance market, the Agility Series is a new solution for SSD enthusiasts seeking blazing speeds at an affordable price. Boasting 64MB cache and the latest architecture and controller design, this new addition to our SSD lineup is a formidable opponent to even the most expensive competitors.

The OCZ Agility gives customers a bang for their buck

With read performance up to 230 MB/s and write bandwidth up to 135 MB/s, we have no doubts this engineering feat will continue to impress all those who encounter it.

High capacities and low power consuming NAND flash technology provide the necessary performance and battery life boosts generated by the proliferation of mobile gaming and new ultra-thin laptops. Backed by a 2-year warranty, the OCZ Agility not only gives customers a bang for their buck, but also great peace of mind. These SSD's come with an excellent 1.5 million hour mean time before failure (MTBF) and the durable yet lightweight alloy housing provides shock resistance up to 1500G. For our price-conscious customers, the combination price, performance and reliability with the Agility Series can't be beat!

OCZ Sponsors Master Overclocking Arena 2009

Themed the "IT Olympics," the Master Overclocking Arena hosted by MSI Computer event will bring together the top overclockers from around the world to compete and put their abilities to the test. OCZ memory was chosen because of the aggressive speeds and timings that take full advantage of the overclocking capabilities of MSI motherboards. Prizes include OCZ Blade Series memory, MSI motherboards, and \$6000 worth of other prizes.

OCZ Sponsor's MSI's IT Olympics Themed Overclocking Challenge

OCZ[®] EDGE

Test Freaks Praises the Versatility of the Neutrino Netbook!

"The OCZ Neutrino 10" DIY Netbook is an excellent choice overall. It's an inexpensive choice, especially if you have the needed parts lying around...keeping the price below other comparable netbooks on the market today. Personally I really like the Neutrino netbook, it's small, fast, and versatile, more than enough for basic tasks, and even light multi-media as well. If you're looking for a netbook, then make sure to check out the Neutrino first, it offers more than what other netbooks offer, and the Neutrino is lower priced."

The XTC Cooler 2 is a Valuable Tool for the Serious Overclocker!

"No doubt that the cooler does its job, and makes it a valuable tool to the serious overclocker. I have to say OCZ did overclockers a favor when revising their classic ramcooler design. With added function: speed selector switch, form: taller mounting, and looks: black brushed aluminum, this revision brings the old design up to speed. Seeing a significant temperature drop makes me sleep better at night, and this cooler is welcome in my case anytime."

Blade PC3-16000 receives Best Performance award from TweakTown!

"We can see on the new OCZ Blade series modules that the company is able to offer us a very impressive 7-8-7-20 setup. We adjusted our timings and we were in Windows and benchmarking at 2000MHz with the correct timings within minutes. In the real world environment it's interesting to see that the OCZ modules put out the best performance in both the average and minimum department. The Bottom Line: Aggressive timings and high speeds; there isn't much more a performance junkie will want out of a memory kit."
