

FEATURED PRODUCT: PC2-6400 4GB Quad Kits

This is 4GB of seriously hefty memory! These optimized kits offer users the option of getting the high speeds and high capacities needed for their demanding gaming PC and Vista-upgraded desktops in a unique 4 x 1GB solution. Play with a full tank of memory with these gold and platinum memory modules in your rig.

This is 4GB of seriously hefty memory!

OCZ's Platinum series are engineered to satisfy the demands of overclockers and enthusiasts with an optimal balance of performance, overclocking strength, and capacity. At 800MHz, the 4GB Platinum Edition runs at blazing fast 4-5-4 timings and offers unprecedented bandwidth and stability on the latest platforms.

OCZ's Gold series are ideal for gamers and developed with their distinctive budget in mind. The latest generation of PC games requires large capacity memory to deliver the most powerful, stable system performance. The PC2-6400 Gold Edition is the ultimate memory solution for contemporary graphic-intensive PC titles and provides unsurpassed reliability and performance to unleash every graphic possibility.

The PC2-6400 Quad Kits are 100% hand-tested for compatibility and quality, and feature glimmering platinum-mirrored or gold-mirrored XTC heatspreaders for the most effective heat dissipation and extra flair for your rig. The OCZ Lifetime Warranty and technical support allows you to get the most out of your computing experience with the ultimate peace of mind.

OCZ at Upcoming Games Convention in Leipzig, Germany

OCZ's Ready for the biggest gaming convention in the world? OCZ is! We're gearing up to support our European customers August 23 to 26 by showcasing both OCZ and PC Power and Cooling booths, complete with setup rig, prizes, and more. More than just a trade show, this will be a truly exciting event, with enthusiasts and gamers competing from all over Europe and the world. The event not only offers gaming competitions, but live outdoor concerts and interactive entertainment, educational presentations, and various workshops.

Ready for the biggest gaming convention?

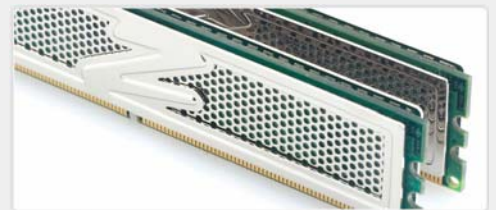

And why bother to stay in a hotel, when attendees can setup camp right on the spot to ensure maximum overnight partying. The Games Convention will be held from 9am on Thursday to 6pm on Saturday, so don't miss out on your chance to be part of the gaming event of the year.

OCZ[®] EDGE

Overclock 3D Awards 9200 Flex XLC First Ever Best In Class Award for Memory!

"First and foremost the OCZ FlexXLC PC2-9200 kit overclocks like stink! That's stink in a good way too, with the modules hitting a rather dizzy 660mhz - the highest speed out of any DDR2 kit we've ever tested. This awesome performance is also teamed with amazing looks. Gone are the cheap and tacky aluminium heatspreaders in favor of extremely effective hybrid passive and/or water cooled heatspreaders. As the results and pictures have shown, the FlexXLC modules are worth every penny."

Legit Reviews Performs Initial DDR3 Round-Up with OCZ PC3-10666 Platinum Kit

"The OCZ kits got real close to breaking the 1600MHz mark thanks to the Elpida ICs. The OCZ DDR3 PC3-10666 Platinum Dual Channel memory kit performed near or at the top in all the testing."

CrossFire Reaper Takes the Cake at Technoyard!

"As expected OCZ has yet again has delivered well above expectation to the enthusiast market. With modest memory timings of 5-5-5-15 one wouldn't expect to see the results we have achieved here, yet these modules seems to have defied the norm. The Reaper series has received much praise since its introduction over a year ago, and with their new release of the CrossFire Certified modules enthusiast have the added benefit that they're getting the best. Overall this is an exceptionally good product and without doubt comes with a high recommendation from us."
