

## FEATURED PRODUCT: OCZ VERTEX TURBO SERIES SATA II 2.5" SSD

The OCZ Vertex Turbo Series SATA II 2.5" takes the award-winning original Vertex Series and reaches even better performance! Enabled by a proprietary firmware and 64MB of 180MHz DRAM cache, the Vertex Turbo delivers best-in-class read and write speeds clocking in at up to 270MB/s read and 210MB/s write along with the lower power consumption and superior durability. This addition to the OCZ lineup is sure to break new boundaries and bridge the gap between MLC and SLC drives. Backed by a 3 Year Warranty, this drive maintains a prestigious standing along with OCZ's exemplary service and support.

Here's what top review sites are already saying about this product:

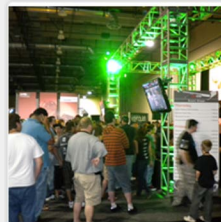

**Benchmark Reviews** – *"The OCZ's Vertex Turbo series is closing the gap between MLC and more expensive SLC SSDs... recommended to enthusiasts wanting the absolute best performance from their computer system."*

**Driver Heaven** – *"When comparing the Turbo to drives based on other controllers we see that it regularly outperforms the Intel X25-M. Without doubt the best Indilinx based SSD available."*

**Guru 3D** – *"I feel it's refreshing what OCZ is trying to accomplish here. From swift to fast to faster to freakishly furious."*

## QuakeCon 2009... a LAN to End all LANs!

OCZ's presence at QuakeCon was definitely a success, thanks to the help of the Auravision team and the Fatal1ty brand partnership! We reached out during presentations to educate new and loyal fans alike, while answering questions and giving advice. The crowds got wild for the fun games and prizes—it was definitely a sight to see. Overall the event helped more people realize that OCZ is the overall best memory and PSU brand for gaming!

The crowds gather to watch the famous Fatal1ty shootouts

## OCZ<sup>®</sup> EDGE

Reaper Triple Channel is the Editor's Choice at Tech Power Up!

"The memory is great for hardcore overclockers going with any type of liquid cooling, as I am sure the OCZ Reaper HPC can go a bit further and should easily break the 2100 MHz barrier at CL8. On one hand you receive memory, which manages to run well at the low voltage required for the Intel chip, but you also get great overclockability if you are willing to push the memory further. You really cannot go wrong with the OCZ Reaper HPC kit."

Guru3D declares the Agility another Winner!

"I think it is safe to state that OCZ absolutely tries to dominate the SSD market, and with good success. The end-result is quite honestly a high-end performing SSD. OCZ might advertise the write speeds at 135MB/sec...the reality is that on average it's faster. We were impressed by OCZ's Agility for sure, blazing speeds, stunning access times and a nice cache making the SSD very suitable for any operating system. Products like the Agility as such bring a big smile to my face."

PC Wiz Kid Tech Talk gives Behemoth their Recommendation!

"PCWizKid was truly impressed with the comfortable styling and smoothness all round. The ability to record the macros and store configuration settings on board is a big plus for those hardcore gamers going to LAN parties and looking to quickly get into the game hassle free. PCWizKid gives this an editor's choice recommendation as the OCZ Behemoth Laser Gaming Mouse did indeed live up to expectations and proved to be a great peripheral any gamer should not be without."
