

FEATURED PRODUCT: PC3-17000 FLEX EX 8GB LOW VOLTAGE DUAL CHANNEL KIT

Tired of choosing between speed and gigabytes? Look no further than our Flex XLC high density 2133MHz memory kits! OCZ's new high-speed 4GB modules are perfect for users who demand both blistering performance and thermal management in one memory solution, available in 8GB dual channel or 12GB triple channel whatever your favorite

The new Flex XLC kits deliver unprecedented bandwidth for a wide range of applications

platform. For enthusiasts and overclockers looking to take their gaming or productivity to the next level, these new Flex XLC kits deliver unprecedented bandwidth for a wide range of applications ranging from video rendering to fluid gameplay on the latest PC titles. High-frequency memory kits such as Flex XLC ensure the system RAM will never be the bottleneck during intensive multi-tasking, gaming, or home server environments.

Each Flex EX memory module features this breakthrough thermal management technology from OCZ, combining an effective and compact heatspreader design with integrated liquid injection system and dedicated channels directly over the module's ICs. In addition, all OCZ 4GB modules operate at a low-voltage specification of 1.65V for the latest platforms and CPUs.

OCZ and Caseking team up for Gamescom 2010 !

At Gamescom 2010, the largest gaming expo in Europe, OCZ teamed up at the Caseking booth to showcase leading-edge SSDs, memory, and power supplies that cater to the global enthusiast and gamer markets. Fans were able to try out products, win prizes, face-off in Counterstrike, or take pictures with the Caseking "Bikini Girls" or Germany's Next Top Model contestant Micaela Schäfer. What an incredible event of fun and gaming!

OCZ[®] EDGE

RevoDrive earns the coveted "Editor's Choice" at Hot Hardware!

"It's just this simple: the RevoDrive rocks. In less than a year, OCZ slashed more than half off the price premium on PCI-Express storage, brought the RevoDrive almost in line with standard SSD drives, offers a three-year warranty, and it's bootable. That, ladies and gentlemen, is as good as it gets. We'd recommend the RevoDrive to anyone looking for top-notch performance. The Revo has set a new bar for both SSDs and RAID-based PCI-Express storage cards. We look forward to seeing how the rest of the industry responds."

Hardwareluxx truly impressed by the Enyo USB 3.0!

"For those that are looking for true performance, the OCZ Enyo provides a brilliant performance - with this you could be tempted to memorize all your data on this USB drive. OCZ's Enyo has more Gadget style. It looks very smart and comes with the necessary USB 3.0 cable included. It is a few MB/s more performance and ultimately this has our preference. This is why OCZ's Enyo finishes first by a nose length!"

The Silencer Mk II 750 proves worthy of "Gold" at OCIA.net!

"The Silencer Mk II 750 looks nice, has plenty of rugged connectors, and the cables are long enough for the largest PC case. The PSU comes with a heavy 14ga cord, some wire ties for cable management, and thumbscrews for ease of installation. The Silencer Mk II 750 is 80Plus Silver rated, with efficiency up to 88%. I highly recommend this power supply for any single video card rig, and for SLI up to at least what it is rated for, a pair of GeForce GTX 260s. I imagine it would handle more than that, however."
