

FEATURED PRODUCT: DOMINATRIX LASER GAMING MOUSE

Get ready to whip the competition to shreds! The OCZ Dominatrix mouse is built with the demanding requirements of gamers in mind with a solid design, maximum functionality, and programmable customization unique to each user. Why submit to your enemies when you can dominate them with lightning speed and accuracy?

The Dominatrix features two programmable buttons with three different modes each for game settings and internet navigation to make the mouse your own secret weapon. The included software allows gamers to record, read, and edit unlimited scripts of complex keyboard and mouse commands, while the built-in memory allows you to save your mouse settings onboard, useful when switching computers. Featuring a special 4-way scrolling wheel-tilt button, the Dominatrix allows you to move either side to side or up and down without ever moving the mouse. The Dominatrix sports a large, ergonomic, and stylish design with a comfortable, no-slip rubber grip.

Dominatrix is built with the demanding requirements of gamers in mind

What the critics are saying:

"It has all the features you could want and it feels nice to boot."

- TweakTown Editor's Choice

"The best thing is that when you try it, you feel like you were born with. OCZ kept it simple enough to get easily accustomed to, yet gaming performance didn't suffer."

- Fudzilla Top Value

"The mouse has managed to combine some very unique features, which are usually only found on much more expensive input devices."

- Tech Power Up Recommended

"When gaming the OCZ Dominatrix worked flawless and first person shooters will definitely enjoy the gaming experience. Fast movements and sudden shifts in direction are no problem at all." - Technic3D Silver Award

When you want to maximize your fragging while saving a few dollars in the process, the Dominatrix is the ultimate gaming mouse! Whether you plug and play or decide to program the software with your unique specifications, the Dominatrix is ready to take on your next battle right out of the box.

Legit Reviews Says 4GB Never Looked So Good!

"The OCZ PC2-9200 Flex II 4GB memory kit steps up the game for 4GB memory kits. Focusing solely at the performance available, this kit really does give you the flexibility to choose between tight timings or high frequencies with appreciable read, write, and copy bandwidth across the board. Factor in the overclocking, Extended Voltage Protection, and the Xtreme Liquid Convection heatsink and you've got a well rounded memory kit. Out of the box the OCZ DDR2 PC2-9200 Flex II 4GB memory kit works great with few adjustments to the BIOS and has great potential for those RAM tweekers out there."

Hot Hardware Finds Core SSD "Absolutely Impressive!"

"What was absolutely impressive were the random access and seek times, along with the benefits that come with them and Solid State Storage in general. From lightning fast boot times, to near instantaneous application loading, our SSDs blew the already lightning fast WD VelociRaptor out of the water. The OCZ Core Series drive was generally the fastest of the bunch. We like the relatively low cost and robust performance of the OCZ Core Series SSD and it's one of two in our round-up that we feel confident recommending to our readers."

Silencer 750 is a Top Notch PSU for HardwareZone

"We can clearly say the Silencer 750 Quad is a top notch power supply. It certainly stands out among other power supplies in the same price range. There's no doubt that the Silencer 750 Quad met our expectations of a product from a company with such high reputation in the industry. Due to the Silencer 750 Quad's high performance, we have chosen to give it our 'Recommended' award. It will definitely become the most worthwhile power supply on the market."
