

FEATURED PRODUCT: PC2-6400 ATI CrossFire Certified Modules

OCZ Technology and ATI are a match made in gaming heaven. The new ATI CrossFire Certified Memory Series is the end-all, be-all solution for ATI enthusiasts and system builders.

The CrossFire Certified 2GB kit is the supreme solution for gamers

Tested and qualified under ATI's renowned certification program, the PC2-6400 CrossFire series not only meets a high standard of quality, but guarantees superior compatibility with CrossFire technology. Combined with ATI's esteemed CrossFire platform, the OCZ PC2-6400 certified series delivers a stunning visual experience and high performance for hardcore gamers. ATI enthusiasts and system builders will love the customized look of the new PC2-6400 line only available with OCZ certified modules.

ATI enthusiasts and system builders will love the customized look of the new PC2-5400 line; these modules are cooled with an exclusive ATI special XTC (Xtreme Thermal Convection) heatspreader displaying ATI's "Certified" logo.

The PC2-6400 line will be available in 1024MB modules and 2GB (2x1024MB) dual channel kits optimized for the latest DDR2 platforms. With many of today's PC game titles calling for a minimum of 2GB of memory, the CrossFire Certified 2GB kit is the supreme solution for gamers seeking the advantages of increased reliability and bandwidth management.

Each OCZ PC2-6400 CrossFire Certified module is backed by an industry leading OCZ Lifetime Warranty and technical support for unparalleled peace of mind.

The Flash Drive that Gives "Convertible" a Whole New Meaning

The new OCZ Roadster USB Flash Drive features an ultra-portable "Top-Down" design that makes data storage and transferring easier and more portable than ever. Best of all, there is no cap to lose with the OCZ Roadster's modern design. Unlike other convertible drives the Roadster remains ultra portable thanks to a very compact profile that manages to put all the memory components into the connector alone.

Take your data for a ride with the "top-down" !

The OCZ Roadster is designed to be the most portable convertible USB flash memory drive on the market and comes backed with a 3 year warranty for the ultimate peace of mind. Take your data for a ride with the "top-down" !

Viperlair Recommends the OCZ GameXStream

"The OCZ GameXStream is a rock solid PSU, it is an excellent performer voltage wise, well cooled and not so loud that you'll want to keep the PC in another room so you can hear yourself think. OCZ knows what gamers and PC enthusiasts want, extreme performance, stability, quality and last but not least it has to look good to. The GamerXStream provides all of this and more."

PC Magazine says OCZ Gold is the best memory for "The Best PC for the Money!"

"On the memory front, you could easily get by with 1GB of RAM these days. For most tasks in Windows XP, that's plenty. But there are a few games that benefit from extra memory, with more titles on the way. Heavy Photoshop users or video editors could use a bit more, too. We had a better reason for pushing this system to 2GB, though: Windows Vista. Vista will use RAM more efficiently than XP does, with its advanced prefetching algorithms. I found a good deal on a pair of OCZ 1GB sticks that offer pretty good latency for 800-MHz DDR2 RAM. This level of performance for \$200 is too sweet a deal to pass up."

Driver Heaven Recommends the Tempest to Gamers, Modders and Enthusiasts!

"The OCZ Tempest is a good cooler overall with slot versatility and appearance being the strongest attributes. That said, the Tempest is recommended to gamers, modders and enthusiasts who want a good looking and high performing cooler. It is also highly recommended to people who like to change and experiment with their systems often, since the cooler can be mounted on any motherboard."
