

■ FEATURED PRODUCT: ATV Turbo 4GB / 8GB Flash Drive

OCZ's premier flash drive has proven itself a worthy opponent to other competitors boasting top speeds and unshakeable durability! Reviewers have boiled, buried, crushed, drowned, dropped, and tumble-dried their Turbos without inflicting any damage. The ATV Turbo just kept on kicking, not to mention cranking out some of the most breakneck speeds ever tested!

See what the reviewers have said so far about this sturdy and speedy flash drive:

"The OCZ flash drive lived up to its expectations with some of the highest performance numbers we have laid our eyes on for flash drives." - *Overclockers Pulse*

"This drive has certainly proven itself here today, both in terms of durability and sheer speed." - *OCIA.net*

"I know I've got a new personal favorite flash drive in the ATV Turbo!" - *Dragon Steel Mods*

"This product is not your average flash drive though. This is an ATV Flash drive! The OCZ ATV Turbo Flash Drive comes with ReadyBoost technology which is great for those who have little system memory." - *3dgameMan*

"The ATV Turbo is an excellent choice and the rugged housing of the drive will keep your data safe even in the most extreme conditions." - *DV Hardware*

"One thing is for sure: the OCZ ATV Turbo looks very rough and robust. The results speak for themselves, OCZ is just too fast for any other drive to keep up." - *TechZine (NL)*

If you are looking for a stylish and convenient storage solution for all your most important files, trust the ATV Turbo to serve up a dish of blazing speeds, sleek looks, and unbeatable data security.

ATV Turbo - Blazing speeds, sleek looks and unbeatable data security

1600MHZ DDR3 Overclocks Its Way to Editor's Choice at Legit Reviews!

"After spending hundreds of hours testing ten different memory kits it's hard to ignore the overclocking performance I have seen on the 2GB DDR3 PC3-12800 Platinum Series Kit. For the best overclocking DDR3 kit I have seen yet, I give the OCZ PC3-12800 Platinum Series the Legit Reviews Editor's Choice Award! OCZ must have screened a ton of IC's to get these top notch Micron D9's that have been used in their OCZ PC3-12800 Platinum Series. These modules will bring fear to others as they blaze past MHz mile markers like nobody's business."

Vendetta CPU Cooler Holds Its Own Against Larger Competitors at AnandTech!

"OCZ is a name that comes to mind whenever you discuss solutions for computer enthusiasts. The OCZ Vendetta is a very good value in midrange cooling. For around \$30 it matches the performance of entry-level water cooling at a much lower price. This is enough savings to forgive the minor performance reductions you get with this smaller cooler. The good news is the cooling scaling behaves exactly like the very best coolers, and performance is predictable and very competitive."

■ OCZ Wraps Up Another Newegg LANfest in Ontario, CA

OCZ definitely had the weekend highlight with the stage competition! The "Geek to Sweet" makeover entertained all as contestants strutted around decked out in makeup, princess crowns, and feather boas. One by the one the "models" struck a pose, each vying for the chance to win RAM, power supplies, flash media, and gaming mice. The winners walked away with some great OCZ computing gear and lovely princess ensembles. The enthusiasm of these contestants made the OCZ contest a great time for all the last remaining worn-out LAN-goers on Sunday.

The "Geek to Sweet" models make off with some great OCZ gear!

Other great OCZ highlights included being televised demonstrating the neural impulse actuator on several stations, tattoo applications, and head-shaving our logo on dedicated gamers.

'Unpretentious' StealthXStream Recommended as a Top Value for Money PSU at OC3D

"The StealthXStream really has fulfilled most of my expectations and indeed, in some cases exceeded them by a comfortable margin. The unit is sold as a simple and 'unpretentious' power supply, capable of running demanding gaming computers with high reliability, efficiency and silence. The StealthXStream is efficient, handles load well, and is very quiet. Its size and available connectivity options makes it suitable for a massive range of cases and enclosures while delivering the same high performance."
