**FEATURED PRODUCT: The OCZ EvoStream Power Supply**

As OCZ's latest addition to their esteemed Power Supply family, the EvoStream features an advanced 100% modular cable management system and polished, titanium mirrored case that is reminiscent of the award-winning ModStream line.

Ideal for the performance-minded and high-power user

Ideal for the performance-minded and high-power user, the EvoStream combines leading-edge technology with a classic, sleek look that system builders and LAN gamers are fond of. To optimize airflow and elimination of cable mazes, the EvoStream power supply is equipped with EZMod technology to allow complete customization of your power system by utilizing only the cables you require.

As gamers and system builders continue to enhance their PCs with higher performing components, power supplies are expected to remain stable for extensive amounts of time at elevated performance levels. The EvoStream line incorporates a high-end core and circuit design ensuring all your vital PC components are supplied a stable and vigorous source of power in even the most intense computing environments.

Next generation CPUs and high performance graphics cards are essential to modern gamers and enthusiasts; the rock solid EvoStream is built to provide sufficient output to power dual GPU and CPU platforms, complete with two PCI-Express cables and a 4/8 CPU auxiliary connector. With a sustained output of 600W and four +12V rails to provide uniform distribution of power, the EvoStream is well-suited for and driving today's higher end systems.

The OCZ EvoStream provides Active PFC (Power Factor Correction) to effectively regulate input voltage and provide superior operation in a wider range of environments and countries with varying voltages. All OCZ EvoStream power supplies come backed with an industry-leading three year OCZ PowerSwap Warranty for the ultimate peace of mind.

More powerful EvoStream PSUs to come!

**The New Mega Kart: Same Size, More Room**

The OCZ Mega Kart is now available in 16GBs! The roomier Mega Kart features the same unparalleled, ultra-slim architecture that is thin enough to carry in a wallet. The 16GB OCZ Mega-Kart is a dream-come-true for individuals who need to carry huge quantities of data, including presentations, programs, videos, and entire portfolios, yet don't want to lug around a laptop or bulky pocket drive. The Mega-Kart conveniently fits in the smallest places so it can always be handy to access your files and is large enough to never worry about being forced to delete files to add new ones. 16GBs too much? The 8GB counterpart is currently available at your favorite e-tailer,

**OCZ<sup>®</sup> EDGE**

**Driver Heaven Awards the OCZ 1100MHz Gold for its Blazing Speed and Super Value**

"One of the things we love about OCZ's memory is that it looks phenomenal, the gold and platinum edition modules just ooze quality and the XTC heatspreaders which have been used for a while now add a real cool factor to the product. In the performance stakes OCZ's modules do not disappoint. Stability was also never in question and throughout our testing the modules performed flawlessly."

**Overclocker Café gives the "Nifty" SD Dual their Editor's Choice**

"What a nifty unit. The ability to pop the SD memory card out and by way of its USB end, plug it directly into my PC without the presence of a card reader is worth its \$50 street price alone. Two thumbs way, way up on this one."

**Bjorn3D Recommends the OCZ PC2-7200 Platinum with their Seal of Approval**

"OCZ is known for producing a superior product and the Platinum 7200 EPP DDR-2 is certainly no exception. We highly recommend it for any system requiring the talents this high-performance RAM has to offer. It will be especially nice if your system happens to support NVIDIA's new EPP technology which should skyrocket if adopted by all chipset and motherboard manufacturers."
