

**FEATURED PRODUCTS: "Overclocking Stuffers" - PWN for the Holidays!**

Give the gift of OCZ to your favorite gamer, maybe they will go easy on you next time you are head to head in an FPS.

**PC Power & Cooling Silencer 610**

For the overclocker and gamer that overtaxes their PC and experiences frequent system failures, bestow the rock-solid Silencer 610W to uphold the stability of their gaming rig. The Silencer's proven performance and sufficient wattage will power multi-GPU systems without breaking a sweat. 80-Plus Certified, this energy-efficient PSU will save them some green in the long run, and will be the gift that keeps on giving! Priced competitively with other premium units, this high-performance hardware won't even break your budget.

**OCZ PC2-6400 Platinum 4GB kit**

Know a PC fanatic? This premium 4GB kit will provide sufficient memory to run DirectX-10 games and other intensive applications on the latest operating systems, not to mention bust out some serious speeds and aggressive latencies for overclocking. The platinum-mirrored heatspreaders are a spiffy addition for case-modding enthusiasts, and the lifetime warranty will ensure they can enjoy your gift to its fullest extent. Pick up this memory kit for and supply your friend with plenty of fragging ammunition.

**OCZ ATV Turbo**

Data storage has never been more hardcore, with the ultra-rugged, fast, and stylish ATV Turbo flash drive. The durable rubber housing will keep their data safe through forgetful moments such as drops, spills, washing, and crunching...your data will not be harmed! Proven time and again as one of the fastest drives on the market, they'll be able to transfer music, image, and multimedia files at incredible rates and leave more time for gaming. This is the perfect stocking surprise for the computer lover that wants the latest technologies that will have everyone talking.

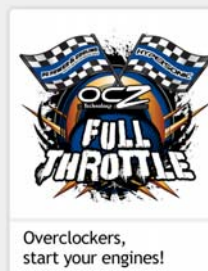

**Hypersonic Aviator series**

The gamer on the go demands a cutting-edge notebook that won't let them down! No ordinary laptop, The Hypersonic Aviator series is sleek, fast, and powerful, featuring an Intel® Core® 2 Duo and NVIDIA SLI graphics. Choose from one of four customizable models that will provide your loved ones with the personalized gaming system of their dreams.

**OCZ Goes "Full Throttle" in 2008**

What does OCZ have in store for CES 2008? With this year's acquisition of two industry-leading computing companies, there is sure to be plenty of new and exciting products that will set new standards. Make a pit-stop to see OCZ, PC Power & Cooling, and Hypersonic and out what is in store from these cutting-edge memory, power supply, and system providers. OCZ is ready to go full throttle this year, so overclockers start your engines!

**OCZ EDGE**

**OCZ 1600MHz DDR3 Overclocks "Better than All Others" at Benchmark Reviews!**

"OCZ hits the target sweet-spot by offering excellent clock speed matched to conservative timings and value pricing. So far in our series, the OCZ PC3-12800 DDR3 1600MHz 2GB RAM has overclocked better than all others. The OCZ3P16002GK is excellent for pushing your system well beyond the manufacturer's intended specifications, and the current market price makes these modules more affordable for hardware enthusiasts."

**Hardware Secrets finds the ProXStream an Impressive Piece of Architecture**

"We were really surprised by the architecture used on OCZ ProXStream 1000W. In fact, this is the first time we've seen a power supply using such architecture. Another interesting thing about this power supply was the ingenious internal design using two stacked printed circuit boards in order to keep it using the standard ATX size. So you get a high-power unit at a small form factor. Even though this is an expensive power supply, it is quoted at a very attractive price compared to other 1000W units."

**Silencer 750W Edges out Competitors for Gold Award at Award Fabrik**

"PC Power & Cooling goes its way with the Silencer Quad 750W PSU. Looking at our test results, the Silencer is extremely stable on all rails. With a 12V single rail at 60A this PSU is aimed at overclockers and users that have a large amount of high end hardware in their system. The manufacturing quality is excellent and the performance is impressive, last but not least the price is good also considering it is SLI and Crossfire certified."
