

■ **FEATURED PRODUCT: OCZ PC2-9200 Flex XLC**

OCZ's latest groundbreaking memory modules are already garnering critical acclaim. As the World's fastest DDR2, the PC2-9200, in combination with the innovative FlexXLC technology, is considerably the most innovative and unique memory product existing today.

OCZ PC2-9200 Flex XLC

Thanks to OCZ's FlexXLC (Xtreme Liquid Convention) heat management solution, the OCZ PC2-9200 operates at extreme speeds of 1150MHz without the high temperatures that inhibit or damage the module's ICs. The FlexXLC module was engineered with a unique "flexible" design which gives enthusiasts the option to run the modules passively or water cooled via the integrated liquid injection system. The concurrent use of both technologies (water-cooling) promotes maximum heat dissipation.

Among these thermal management advantages, the PC2-9200 FlexXLC also implements a new 8-layer PCB with thermally conductive power and ground planes to guide heat away from the interconnects with the memory ICs. This facilitates less "crosstalk," consequently enhancing the module's total signal integrity. The blend of 8-layer PCB technology and the FlexXLC surface cooler truly offers a state-of-the-art design for the extremist.

The PC2-9200 FlexXLC modules are optimized for the latest cutting edge platforms and will be available in 2GB (2x1024MB) dual channel kits. As part of OCZ's line-up of premium memory, the PC2-9200 series is backed by a Lifetime Warranty and industry-leading technical support. Harnessing the achievement of leading-edge speed, high performance heat dissipation, and enhanced signal integrity, the unparalleled design of the OCZ PC2-9200 FlexXLC is a complete, all-encompassing solution certain to set a new benchmark in enthusiast memory.

■ **Check out what OCZ has in store for CES 2007**

Escape the hustle and bustle of the CES convention floor and join OCZ and Shuttle for the night at their "Overclockerfest" CES party on Monday, January 8th. Start the week off right and find out what the industry's most cutting-edge memory company and XPC system builder has in store for 2007. You bring the 'Overclocker'...we'll take care of the 'Fest!'

To RSVP for this invitation only event, please email: jessica at ocz dot com

■ **OCZ EDGE**

**Tom's Holiday Buyers' Guide 2006 Advises "More RAM!"**

"Memory vendor OCZ has something neat for users who intend to mod their systems to the extreme, but don't want to give up performance. The PC2-6400 Special Ops Urban Edition is available in dual channel kits and comes with a nice, military-style coating on the head spreader. It is rated at CL4-4-3-15 at DDR2-800 speeds, but should have some room for overclocking."

**Driver Heaven Awards the PC2-7200 Special Ops Edition their Editor's Choice**

"The OCZ PC2-7200 Special Ops Edition modules offer a great price to performance ratio. They cost almost as little as value series modules and are rated for higher performance. They are a great choice for budget minded enthusiasts and gamers who like to overclock their systems, but aren't aiming to beat online benchmark scores. They can also sustain better timings than those they are rated for."

**OCZ GameXStream Wins Planet3DNow's PSU Round-up!**

"Now this years winner of our roundup is the OCZ GameXStream 700W. It convinced us in terms of performance achieving an amazing efficiency rate of 86% and with an end-user price of around € 140 is money well spent...That's why the OCZ GameXStream receives our yearly Editor's Choice Award."
